## ORGANIZATION OF THE INDEX

This cumulative index of *The Journal of Nutrition* covers the ten-year period 1960–1969, including volumes 70–99 and contains both an author index and a subject index.

The following notes on organization are offered to facilitate use of the index.

All subject entries appear as complete words; common abbreviated terms appear only as cross references. Entries pertaining to humans as the subject species are indexed under human, man, women, girls, children or infants. Common animals and plants have generally been indexed under their common name. Microorganisms and less common plants and animals have been indexed under their scientific name. In indexing common domestic and experimental animal species, special terms denoting age and sex have been avoided. All entries for a given species are generally listed under a single term, such as chicken, pig, cattle, etc.

“Rat” has not been used as a species entry because of the very large number of papers which would be included in this category. The entry “Gnotobiotics” includes all papers dealing with work on germ-free animals.

Indexing and terminology of vitamins and amino acids has been done according to “Nomenclature of Vitamins and Amino Acids, AIN” as published in *J. Nutr.* 99: 245 (1969). Other common terms have been cross-indexed.

Enzymes have been indexed under the name used in the original paper. Whenever that name has been replaced by one proposed by the International Union of Biochemistry “Enzyme Nomenclature,” Elsevier Publishing Company, New York, 1965, the new name appears as a cross reference.

All errata published during the period covered by the index are grouped under the entry “Errata” and show the location of each erratum statement, and the paper to which the statement applies. In

#### ORGANIZATION OF THE INDEX

addition, the term erratum appears with each citation of the paper in the author index.

Each biography is listed under the general subject index term "Biographies." In addition, the biographee appears by name in the subject index and the biographer appears by name in the author index.

A single entry "American Institute of Nutrition, Proceedings" locates the minutes and reports from each annual meeting of the American Institute of Nutrition. No separate indexing of election of fellows, tributes to deceased members, etc. has been made.
