Don’t feed your lab animals like field mice.

Grain-based lab animal diet formulas change to account for geographic and seasonal variations in the macronutrient content of the ingredients. These formula changes can lead to variation in the levels of phytoestrogens, heavy metals, and other xenobiotic compounds that ride-along with these ingredients.

Purified-ingredient OpenSource Diet formulas are completely open and only change at the researcher’s request, allowing them to report exactly what their animals are fed, repeat their experiments, and revise dietary components while matching previous diets. Don’t feed your lab animals like field mice -- Feed your lab animals OpenSource Diets™. Contact our Resource Center at info@researchdiets.com to learn more.

Different models demand different diets...

...and we have over 300!

Including Verified Diets – the first products with controlled and measured levels of total isoflavones.
