“In my eyes, working in the lab animal science field is not just a job. This is my livelihood and passion—a career I truly care about.”

My first job as an Animal Caretaker/Research Assistant initially sparked my enthusiasm for lab animal science. Over the years, I became increasingly engrossed in the field, which eventually led to my current career as a LabDiet® Account Manager.

My experiences on both sides of the field—from cleaning cages to serving on the national board of AALAS—have sculpted my intricate knowledge. I can relate to my clients on multiple levels, which allows me to troubleshoot their problems, guide them in the right direction, and offer sound advice.

LabDiet is a product I proudly stand behind and endorse. My expertise in this field gives me great confidence to represent this brand and the superior level of nutrition it offers. When the end-users are satisfied, I know I’ve done my job well.

LabDiet Account Manager, Northeast

High monounsaturated-fat diet and oxidative stress in overweight men and women
Children’s response to food insecurity in peri-urban Venezuela
Obesity-related eating behaviors, physical activity, and diet quality

Supplement: Nutrition Proteomics and Cancer Prevention
Supplement: Filling America’s Fiber Gap—Probing Realistic Solutions
You roll the dice every time you use grain-based lab animal diets

Chances are the grain-based diets you use today will be significantly different in the levels of phytoestrogens, heavy metals, and other xenobiotic compounds from batch to batch making it difficult to repeat your experiments.

On the other hand, purified-ingredient OpenSource Diet formulas are completely open and change only at the researcher’s request, allowing them to report exactly what their animals are fed, repeat their experiments, and revise dietary components while matching previous diets. Don’t leave your diet formulas to chance -- Know what you’re feeding with OpenSource Diets.
